

List of Tables

1.1	Hi-tech coating deposition combined techniques	2
2.1	Technical specifications	11
3.1	The growth rate of different composition coatings	31
3.2	Samples characteristics	33
3.3	Characteristics of coatings	43
3.4	Mo coating obtained when releasing carbonyl from the container	46
3.5	The parameters of the CVD coating process	47
3.6	The values of hardness measurements	47
3.7	Chemical composition	53
3.8	The parameters of coatings Avinit	54
3.9	Results of units endurance tests	67
3.10	Generalized parameters for the implementation of the of plasma precision nitriding Avinit N method	76
3.11	Comparative characteristics of traditional nitriding and Avinit N plasma precision nitriding processes	77
3.12	The values of the friction coefficients f_{fr} , at various loads	83
3.13	Comparative tribological study of piston rings with the developed coatings	84
3.14	Characteristics of current collector coatings	88
3.15	Electrical characteristics of a thin film unit fuel cell	89
